Whitenoise Laboratories Provides Free Data and Email protection

"The 2016 US elections and wiki-leaks show how far behind the eight-ball the US is in cyber security. The threat is real, pervasive and includes state actors," said André Brisson of Whitenoise Laboratories. "Although this was inevitable, it can be fixed. Even if cynical service providers don't provide your security, you can easily empower yourselves."

NOBUS is the practice of propagating cyber security solutions that is breakable by "Nobody but us!" The institutions, standards groups, multi-nationals and governments that want it both ways have self serving goals and editorials but never demonstrate claims they make as to whether their solutions are secure ([they are not](#)) or other solutions aren't ([because they can't.](#)) Talk is cheap in science. Demonstration is reality.

Whitenoise technologies are patented globally. They are regulated and require permits outside of the United States and Canada which enjoy unencumbered cryptographic technology transfer with one another. Because of this Americans and Canadians can empower themselves and protect their own data and email.

Cyber crime attacks two places – data in storage and network communications. For the average consumer and small businesses network communication is email or the internet.

Whitenoise Laboratories is giving anyone in the United States of America or Canada **FREE PERSONAL PROTECTION.**

The Virtual Disk Encryption Engine (VDEE) will allow you to secure all your data on personal devices with [unbreakable, 25,000 bit plus, one-time-pad encryption](#).

In one step you can protect your data, files and emails from hackers, unauthorized personnel, Black Hats, White Hats, foreign actors, and even employers in "Bring Your Own Device BYOD environments."

A virtual container (silo drive) is created on your device and ALL data is automatically saved with strong encryption. There is NO change in device use. There is no integration with any other device applications.

Email and all documents and files are automatically protected when the data files for related applications are in your virtual drive.

If you lose your phone or tablet or notebook you are protected. If anyone can manage to get access into the device they cannot access data since you are the only one who knows the passphrases.

The Secure Email Attachment Utility allows anyone to send secure files as an attachment to regular email. The users create their own unbreakable key. The user shares their passphrases with their confidential intended recipients. No one else has or knows the unbreakable, 25,000 bit plus, one-time-pad key.

About André Brisson:

Mr. Brisson was listed by the White House Office of Science and Technology Policy as being in the Top 100 Cyber Security Experts and was invited to sit on the core provenance group of the US First National Cyber Leap Year Summit. He conceived Whitenoise and founded Whitenoise Laboratories Canada Inc. (WNL) to exploit revolutionary security technology. He sits on the CST Advisory Board for the British Columbia Institute of Technology (BCIT). Mr. Brisson has been involved in international and national standards organizations. Mr. Brisson has presented at the United Nations International Telecommunications Union. Whitenoise technologies are patented globally.
